Situation

Malawi is landlocked among the least economically developed countries in the world with a population of about 19 million people (2021). The GDP is used in planning and budgeting for government administrative programs. In the Mid-seventies, economic growth was rapid, mainly because of good weather and favourable prices and it has kept with this increase. That trade includes nutrition, health care, education and other social services (Malawi, 2021).

Malawi's GDP was in 2019 at 11 billion US$. The country's global position was then 154 of the 189 ranked countries in the world. The Human Development Index category is 1990, 2018. The country improved in the category with one human development. That was in the category of life expectancy. Malawi has also received improvement in the least standard of living.

Tobacco is the country's major export crop, accounting for about 70% of export earnings. Tea is the second largest export crop, followed by sugar. Cotton, groundnuts, coffee and pulses are also grown for export. Maize is the staple food crop. Production has been increased by the use of hybrid seeds and fertilizers. Other food crops include rice, potatoes, cassava, sorghum, millet, beans and vegetables. Livestock is reared by most households, although the numbers are small. Goats are the most common livestock, followed by cattle, pigs and poultry. Fish is an important source of protein for many households.

In the cost of gross domestic product (GDP), the country had a national debt of 37% in 2013, which is 2.5% of the GDP. Malawi has a high population growth rate of 3.2% per year. Malawi's economy is widely rural. Subsistence agriculture, the use of land and labour for food production, is the principal activity. The rural economy, which is largely cash-based, is dominated by smallholder farmers, who typically cultivated no more than 2 hectares of land.

Malawi regularly suffers from food shortages, such as hurricanes, floods and droughts that always affect the country's economy. Malawi's economy is largely dependent on agriculture, which is vulnerable especially in rural areas, where 85% of households live below the international poverty line and are dependent on subsistence farming. Agriculture employs 80% of the country's workforce and accounts for 30% of the GDP. Malawi has the country's 170th place among the 189 countries ranked. Due to the high interest rates due to the high public debt and the unbalanced balance of payments on the current account. The GDP growth rate was in 2019 at 4.6%. In 2020 at 1.7%. In 2021 at 2.7%. The GDP is constantly exhibiting improvement and economic growth. Due to the lack of improve economic growth, prosperity is therefore not in sight. As the availability of food, housing and health care, the population spans are in 2021:

	Food availability	Housing	Healthcare
Rating:	sufficient	insufficient adequate	insufficient adequate
In %	63.3 36.3	52.1 47.9	52.3 47.7

In terms of external financial distribution, the transport and aviation sectors have begun an era in GDP, each accounting for 10%, followed by the agricultural sector by 20% and the water and communication sectors by 5%. The country's economy is also dependent on tobacco, which is said to be a low level of diversification. There is also investment. Development in industry has therefore been decreased accordingly in recent decades, while that of services has increased. In order to prevent job losses in the agricultural sector, the government has set up a fund to help the sector. Malawi has also set up a fund to help the sector. Malawi has a high level of poverty. Malawi has a high level of poverty. Malawi has the highest interest rates due to the high public debt and the unbalanced balance of payments on the current account. The GDP growth rate was in 2019 at 4.6%. In 2020 at 1.7%. In 2021 at 2.7%. The GDP is constantly exhibiting improvement and economic growth. Due to the lack of improve economic growth, prosperity is therefore not in sight. As the availability of food, housing and health care, the population spans are in 2021:

- to invest in infrastructure, especially in the energy and transport sector and to expand in a market-oriented manner
- to improve the macroeconomic by developing agriculture, broadening crop diversity, processing agro-products and improving export competitiveness

The services sectors should involve the biggest contribution to growth, with agriculture remaining the largest in the economy.

Whether the service sector, which similarly requires more skill, is able to take over the lifestyle, is taken from the industrial sector, is incontestable. It is likely that the agricultural and informal sectors, which are the creative and workforce are, will take over the lifestyle, and

Agricultural activities

Agriculture

The agricultural sector is the mainstay of the country's economy, but it is so conservative that growth is not to be expected in the length of years. The agricultural sector is dominated by small-scale farmers with limited resources. The workforce in 2019 is employed in the agricultural sector. The sector is dominated by small-scale sufficient farmers with relatively more women than men. The sector is dominated by small-scale farmers with limited resources and expenditure. Agriculture is therefore vulnerable to weather-related disasters, despite the potential of irrigation areas. The sector is dominated by small-scale farmers with limited resources and expenditure. Agriculture is therefore vulnerable to weather-related disasters, despite the potential of irrigation areas.

There are several important factors that negatively affect the agricultural sector including the low yields due to a shortage of fertilizers and seeds, poor access to markets and poor infrastructure. Agriculture is the mainstay of the country's economy, but it is so conservative that growth is not to be expected in the length of years. Agriculture is the mainstay of the country's economy, but it is so conservative that growth is not to be expected in the length of years.

Livestock farming

More than half of households in Malawi had animals to care for, usually slaughter animals. Research in 2019 showed that 56% of households in Malawi had animals to care for, usually slaughter animals. 44% of the country had to care for, such as

Source: Lonely Planet

Horticulture

A 2016 International Labour Organization analysis of the horticultural sector in Malawi showed that it is largely underdeveloped, with almost all companies serving the domestic market. Multinationals now have a presence in Malawi. The sector is dominated by small-scale farmers with limited resources and low-level skills. Horticulture, including in the processing of cocoa and coconut.

For all agricultural sectors, it appeared that government interventions, such as export subsidies, innovative agricultural research and loans for agricultural purposes and access to land, are. Also, there is a lack of initiatives in relation to the manufacturing industry and an open market that can contribute synergistically to strengthening the sector.

Migration

Due to the low agricultural yields and the rapidly growing population, food insecurity and poverty have existed in Malawi for decades. For many households, food was a forced reason to look for work for side earnings outside the farm. Male absence in the age group of 14 to 35 years during the period 1998 to 2008 was 10% in the rural areas and 20% in the urban areas. Among the migrants, 70% were Malawians returning to Malawi, and based on the migrants' intentions to return to Malawi, 30% were Malawians who had left Malawi for the first time. Malawi has a high level of migration. Migrants who stayed in Malawi people remained in the large two, tobacco, cotton and sugar plantations and in food processing farms. Migrants who stayed in working in South Africa were employed in the mining industry.

In the latest period, after a notorious phase crash in April 2019, work was nearly done in Malawi and cash was taken home as savings. The results showed a continuing high level of unemployment in Malawi. Malawi has a high level of unemployment. Malawi has a high level of migration from the cities to rural areas, which is a result of the lack of employment in the cities.

The drastic migration of people from the countryside to the city is estimated at 4.5 million by 2030. There they end up in the suburbs with minimal facilities and without regular means of existence. Due to the lack of employment in the cities, the migration from the cities to rural areas. Malawi has also had no opportunity to participate with the era we now depended on when the new technologies in the industrial revolution. In order to reduce crime and sustained in the cities, the government of Malawi has set up a fund to help the sector. Malawi has also set up a fund to help the sector. Malawi has also set up a fund to help the sector. Malawi has also set up a fund to help the sector.

Industry

According to the World Bank, Malawi has to deal with:

- poor good dependence on climate-sensitive agricultural production systems
- animal and plant diseases that lead to large losses in crops and livestock
- scarcity of water, fertilizer and labour in times

the state of health of the population and the financial consequences

The industrial sector in Malawi is small and has not grown much. It has developed. Malawi's Growth and Development Strategy (IFAD/AGDS). The intention is to transform Malawi into a comprehensive prosperous and self-sufficient industrialized country in 2063. The plan is intended to lead to a transformation of the economy and to create employment and prosperity. The plan is including an agro-processing sector in Malawi and to develop integrated parks in Mzuzu, Lilongwe, Chichiriomo, Chipoma and Nkhata Bay. This is seen as feasible if agricultural productivity in Malawi increases and the country's infrastructure is improved.

For a country like Malawi, the plan is ambitious. Lindava Hara is fall of engineering. Minerals et cet, only a few economies in Hatanu have successfully moved from 'poor and agricultural' to 'non-agricultural and rich'. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. The incentive government in combination with a motivated hard-working population. Malawi's growth at the expense of other sectors as delicate, because the financial resources are lacking. The plan is to be implemented in three phases over a period of 25 years.

The regulation of the land was to be used to the equal spread of land of the Malawi Economic has no influence as a supplement to family income. That absence even has a negative downside. After all, the land is not available for other purposes. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

Employment

The government of Malawi does not seem able to formulate a sound policy for the socio-economic development of the country and its 6 days 6. Several factors can be cited for this, including the lack of financial resources, weak coordination of programs and projects, natural disasters and an unstable macroeconomic environment. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

Unemployment

Unemployment, the lack of employment and economically vulnerable work are a major challenge for Malawi's development. The most recent survey shows that 21% of young people aged 15-24 have no work. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

At the interpersonal level, unemployment and/or underemployment who has a direct impact on the quality of life. About 30% of households in Malawi live on less than US $1 and experience poor quality of life.

The impact of unemployment also extends to the society in which the unemployed live. Although one person's unemployment may not affect the rest of the community, high unemployment leads to cumulative poverty rates. Malawi has fertile agricultural land and a lot of water, but its exploitation is poor. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

In addition to effects at the individual and social level, unemployment also has direct consequences for the economy. The unemployed consume less than people who have a regular income and pay less taxes. The research also provides some pro-effects who make products that are difficult to market. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

The unemployed also have no direct source of income that is difficult to meet their own needs and also affect the level of health. Malawi regularly faces many of its energetic young people who are unemployed and underemployed. Malawi has fertile agricultural land and a lot of water, but its exploitation is poor. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

- the lack of capital
- the poor education

Unemployment and population growth

Statistically, population growth is increasing at a rapid pace, putting even more pressure on natural resources and ecological sustainability in Malawi. These implications have a direct impact on the country's economic development. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

Inflation

If you have to believe the media headlines of Malawi, the country is doing well economically. This raises questions because the income per head of household is currently statistically lower than in the mid-1990s. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. The observations must therefore be relative because Malawi is still one of the poorest countries in the world. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

Since the end of the world, Malawi has become a major recipient of development aid from the West. The systematic money transfers of wealthy countries, mysterious the World Bank, consist of loans at low interest rates. The aid is also intended to support the development of the country and to reduce poverty. The aid is also given with the good competition to be. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

The grants are intended to fund earmarked projects. The existing mindset about these cash flows is that they are a kind of gift. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

Malawi has an unstable state institutions and the many remissions, skipping bans by incompetent management is a disaster. The apparent error has a decisive influence on the economic balance of payments because the money in foreign currency is not there. Usually the loans are repaid after 40 years. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Growth and Development Strategy MGDS III

On March 12, 2018, the Government of Malawi published its *Growth and Development Strategy MGDS III 2017-2022*. It formulated its priority areas to promote a productive, competitive and resilient economy. The MGDS III is the country's overarching medium-term development framework. It is the third Malawi Millennium Development. The MGDS III was an adjustment, because it had been difficult to measure against external poverty and hunger, the quality of primary education, private equality and the lack of other livelihood and livelihood opportunities. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

The comprehensive plan also included strategies sustainable agriculture and economic growth, sustainable energy production, improved infrastructure, social welfare and development, climate change, environmental management and population challenges. To implement the MGDS III, the government has called upon because the transformation required a change of mentality, a more effective governance system and a more professional public service. The MGDS III is also dependent on the private sector and the business sector. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure. Malawi's economy is dependent on agriculture and is vulnerable to crop failure.

objectives that were necessary in the implementation were missing. For the financial coverage, macroeconomic data had been used including an assumed additional revenue from domestic resources (+23%). Although that intention is a de-saming of domestic economic activities, growth of 7% was nevertheless expected. This was considered possible if foreign donations and subsidies were maintained by 28% of gross domestic product (GDP). Also, a budget overrun of $1.2 billion was held accountable despite the frequent devaluation of the Kwacha and the negative economic indicators.

In January 2021, the government launched an addition to the MGDS III, the *Malawi 2063 Vision* with the aim of *"...as a god-fearing nation, safe, democratically mature, ecologically sustainable, self-reliant with equal opportunities for all, with social services, with vibrant cultural and religious values and with a technologically driven middle-income economy..."* to transform the country into a rich, self-reliable and industrialized country with higher middle incomes. The intention was in fact a form of poverty reduction due to the unbalanced population structure, the lack of prospects and the high youth unemployment. Because in the long run there was fear of an unstable society, the government felt compelled to take measures to offer young people in particular a perspective by offering them a meaningful and productive life in a skilled and healthy manner. The costs for this would be covered by the commercialization of agriculture, industrialization and by urbanization.

When MGDS III was released, an extensive list of projects was added that donors could choose to contribute if desired. Policy and coordination were lacking. The impression is that that list of plans was created by political interference and patronage; not much more than a wish list.

By using measurement data from the past from a macroeconomic instability and combining it with assumptions, a disorder arose immediately during the execution. In a financial sense, this had to do with, among other things, the shortage of domestic resources that were estimated too rosy and its dependence. Also, due to insufficient donor support, a number of planned programs could not be implemented and caused a gap in the government budget. There were also delays in implementation. A number were terminated due to lack of knowledge and leadership, insufficient partner support and logistics problems. Due to coordination problems, it also appeared that large wastes gradually arise within the different ministries and departments, often because the work was at different stages with result-oriented approaches.

Below is a reference to a project from the appendix on developing employment for young adults in various cities. This project was given a high priority after the appearance of the *Malawi 2063 Vision* because of the worrying number of young unemployed. As usual, the needs are convincing, but nothing has been recorded about the implementation so that the project becomes corrupt as a plan. These are 17,000 new jobs and 6,000 companies that are not there and due to the absolute lack of domestic demand and education, cannot be created meaningfully in the long term either.

Karonga, Likoma, Mzimba, Nkhata Bay, Rumphi, Kasungu, Mchinji, Chikhwawa, Neno, Phalombe, Thyolo	
OUTCOME: SKILLED AND EMPOWERED YOUTH POPULATION	
PROJECT NAME: JOBS FOR YOUTH	
PROJECT DESCRIPTION The Jobs for Youth project seeks to economically empower young women and men for improved employability in decent work and sustainable entrepreneurship in the country.	**PROJECT OUTPUT** The project is expected to create an estimated 17,000 jobs and 6,000 businesses for the youth.
PROJECT OBJECTIVES To address youth employment issues by fostering entrepreneurship and job creation.	**STRUCTURE OF PARTNERSHIP** The project will be will be coordinated through the Ministry of Labour, Youth and Manpower Development. It will be co-financed by the Government of Malawi and African Development Bank/
PROJECT LOCATION The project will be implemented nationwide targeting University and Community College graduates to encourage entrepreneurship.	**ESTIMATED COST OF THE PROJECT** The total cost is MK 9,180,000,000 (US$12.24 million of which US$1.74 million is a grant).
